

Need more space for storage? Loft ladder access to your roof space might be the answer.

These timber loft ladders are constructed in three folding sections, providing easy and safe access to attic spaces. When installed, this space-saving ladder folds neatly away into the ceiling.

The loft ladder is fitted with a thermo-insulating trap door with a white finish. The spring operated lowering mechanism is easily adjustable to optimize the force of the ladder trap door when it is opened and lowered. The ladder is engineered and built tough for frequent use and includes plastic feet to reduce scratching on timber floors. It has a rated load capacity of 160kgs.

Finally a safe way to access your roof space without the risk of tipping ladders.
